

Statement of Regulatory Compliance

Touch Briefings, while not subject to Codes of Practice, is committed to the observance of those regulations that govern the promotion of medicines and the support of scientific and educational material.

- Approximately 75% of Touch Briefings' published content is independently commissioned by an in-house Editorial department from key opinion leaders in their respective specialties. The remaining 25% comes from industry support.
- Touch Briefings requests support—potential supporting companies do not approach Touch Briefings.
- Company support is clearly and prominently disclosed, once on the journal's masthead and again on each supported article. Transparency is of primary concern.
- Touch Briefings will request support for a non-promotional medical education programme, for which Touch Briefings can provide a budget and schedule if requested.
- Touch Briefings assures that published content will be educational and will be planned, designed, and implemented in accordance with applicable Codes of Practice.
- Prior to development of content, Touch Briefings discusses with the supporting company all on-/off-label issues, subject to the supporting company's legal team's requirements.
- Authors are commissioned by Touch Briefings.
- Any commercial bias in the content is clearly disclosed.
- Content will be neither misleading nor disparaging. All content is subject to external, independent peer review, and quality control procedures ensure objectivity, balance, and scientific rigor. Touch Briefings does not publish exaggerated or all-embracing claims.
- All authors either disclose conflicts of interest or clearly state their absence.
- Where writers have received writing assistance, such assistance is disclosed.
- Authorship of all supported content is in accordance with those criteria recommended in the PhRMA 'Principles on Conduct of Clinical Trials and Communication of Clinical Trial Results,' effective as of October 1, 2009.
- All content distributed at meetings or derived from meetings is subject to the same standards of peer review rigor as content appearing in the journals.
- All content distributed at meetings or derived from meetings complies with all applicable Codes of Practice, and is in accordance with all local regulations.
- When content is distributed at meetings in countries for which a related product does not have marketing authorization, it will be accompanied by a suitable statement indicating countries in which the product has marketing authorization.
- Touch Briefings does not publish content that induces to prescribe or that seeks to promote any product prior to the granting of marketing authorization. However, the legitimate exchange of medical and scientific information during the development of a medicine is not prohibited, provided such information or activity does not constitute promotion.
- Third-party scientific and educational conferences or professional meetings can contribute to the improvement of patient care, and therefore financial support from companies is appropriate. Care is taken to ensure that reports of meetings may not be interpreted as promotion. Content is written by Touch Briefings editorial staff, and support is clearly declared.
- All reprints will carry a label (where appropriate) disassociating a company from the views of the author, and explicitly stating that the reprint is unsolicited.
- Financial support of Touch Briefings' content is never perceived as an inducement to healthcare professionals to prescribe or recommend a particular medicine or course of treatment.
